Professional Summary

- Responsible and resilient IT professional with 1 year of experience as an Assistant System Engineer at TCS, specializing in system administration, cloud fundamentals and backend systems in a large-scale environment.
 - Passionate about **building and automating cloud infrastructure** on AWS. Eager to transition into an AWS Cloud / DevOps role, bringing building automation, troubleshooting and cloud-hosting skills.
 - Strong in **problem-solving, technical ownership, and team collaboration**, I take initiative to understand root causes, implement sustainable solutions, and respect every team member's contribution.
-

Education

B.Tech – Computer Science and Business Systems

K. Ramakrishnan College of Engineering, Tiruchirappalli

2020 – 2024 | CGPA: 9.32 (Gold Medalist)

Technical Skills

- **Cloud Platforms:** AWS
 - **DevOps & Automation:** Docker, Kubernetes, Jenkins (CI/CD), Terraform, Grafana, Git, Linux Basics.
 - **Programming:** Java
 - **Architecture & Tools:** PEGA (Senior System Architect) OOP, SDLC.
 - **Soft Skills:** Facilitation, Resilient, Respect for individual and Cross-functional Collaboration.
-

Work Experience

Tata Consultancy Services (TCS) – Assistant System Engineer – Trainee

Sep 2024 – Dec 2025

- Provided system and application support for on-premise and cloud-based environments, including log analysis, incident triage, and basic troubleshooting.
 - Assisted in monitoring infrastructure health, escalating issues to higher-level teams, and maintaining documentation for known-error resolutions.
 - Gained familiarity with IT operations workflows, change-management processes, and basic cloud-service concepts (servers, networking, and security).
-

Certifications & Training

- **AWS APAC by AWS** (Virtual Internship – Forage) – AWS Cloud and operations fundamentals.
 - **AI by Vista Equity Partners** (Virtual Internship – Forage) – Applied AI and cloud-related workflows.
 - Forage / AWS-style practice modules: Hands-on exercises in AWS navigation, log analysis, troubleshooting, and basic cloud support.
-

Projects

- **Bot-Based System for Cardiovascular Disease Management:** Built a **Python-based** system to collect, track, and manage patient vitals, ensuring data integrity and reliable storage. It has been implemented in AWS Ec2 with the Machine learning concept called Perceptron Neural Networks.
- **Drug Purchase & Pet Store Management Systems (PEGA):** Developed automated workflows and modules to streamline inventory management and user notification efficiency.
- **Three-Level Security Authentication System:** Designed a multi-layer authentication model to protect sensitive data and strengthen application security.
